A Positive State Obligation to Counter Dehumanisation under International Human Rights Law

Stephanie Eleanor Berry

Abstract

International human rights law (IHRL) was established in the aftermath of the Second World War to prevent a reoccurrence of the atrocities committed in the name of fascism. Central to this aim was the recognition that out-groups are particularly vulnerable to rights violations committed by the in-group. Yet, it is increasingly apparent that out-groups are still subject to a wide range of rights violations, including those associated with mass atrocities. These rights violations are facilitated by the dehumanisation of the out-group by the in-group. Consequently, this article argues that the creation of IHRL treaties and corresponding monitoring mechanisms should be viewed as the first step towards protecting out-groups from human rights violations. By adopting the lens of dehumanisation, this article demonstrates that if IHRL is to achieve its purpose, IHRL monitoring mechanisms must recognise the connection between dehumanisation and rights violations and develop a positive State obligation to counter dehumanisation. The four treaties explored in this article, the European Convention on Human Rights, the International Covenant on Civil and Political Rights, the Framework Convention for the Protection of National Minorities and the International Convention on the Elimination of all forms of Racial Discrimination, all establish positive State obligations to prevent hate speech and to foster tolerant societies. These obligations should, in theory, allow IHRL monitoring mechanisms to address dehumanisation. However, their interpretation of the positive State obligation to foster tolerant societies does not go far enough to counter unconscious dehumanisation and requires more detailed elaboration.

Keywords: Dehumanisation, International Human Rights Law, Positive State obligations, Framework Convention for the Protection of National Minorities, International Convention on the Elimination of all forms of Racial Discrimination

1 Introduction

International human rights law (IHRL) was established in the aftermath of World War II with the aim of preventing a reoccurrence of the atrocities committed in the name of fascism. The need to protect the other from rights violations committed by the majority was a central concern of the drafters of IHRL treaties in the post-War period and was recognised as key to preventing the commission of future atrocities. It is no coincidence that the first three IHRL treaties drafted under the auspices of the United Nations addressed genocide, refugees and racial discrimination, respectively.1 Yet it is increasingly apparent that the mere existence of IHRL is insufficient to prevent violations of the rights of minorities and that mass atrocities including ethnic cleansing and genocide have not been confined to history. This article takes as its starting point that the creation of IHRL treaties and corresponding monitoring mechanisms should be viewed as the first step towards protecting the rights of out-groups. It argues that IHRL monitoring mechanisms must both recognise and seek to address dehumanisation as a root cause of human rights violations, if IHRL is to achieve its purpose. Thus, they must develop the preventative part of their mandates and elaborate a positive obligation for States to disrupt the process of dehumanisation and change societal attitudes towards out-groups.

The term ‘out-group’ is used in this article as a catch-all term to denote a group bound by a common identity, distinct from that of the majority – in-group – population, that is used as a pretext for the commission of rights violations.2 While it is human nature for members of in-groups to stereotype or be prejudiced

---

2. This includes ethnic, linguistic or religious and national minorities, as recognised in international minority rights law, but also encompasses other groups that may be identified as ‘other’ by the in-group such as sexual minorities (sexual orientation or gender identity), persons with disabilities, migrants, refugees and political minorities. It is not relevant for the purposes of this article if the societal out-group self-identifies on the basis of this identity, as long as the in-group views the out-group as ‘other’ and this has the potential to result in human rights violations.
towards out-groups, this becomes problematic when it is used to legitimise the ill-treatment of these out-groups, particularly at a societal level. The concept of dehumanisation (and infrahumanisation) has been developed within social psychology, and the associated field of genocide studies, in order to explain the social process that underpins the commission of harm against out-groups. In contrast, concepts such as prejudice, stereotyping and intolerance, which are perhaps more familiar to a legal audience, form just one stage in the process of dehumanisation. The concept of dehumanisation has, further, informed academic literature that has explored how these social processes can be countered or prevented in practice. Thus, the conceptual framework provided by dehumanisation allows this article to expose the social processes that legitimise human rights abuses and reveal how these processes can be countered through the elaboration of a positive State obligation.

IHRL scholarship has not previously engaged in detail with the insights provided by social psychology, and related fields, in relation to the process of dehumanisation. By adopting the lens of dehumanisation, this article sheds new light on why the IHRL project has not been able to achieve its stated aim of protecting out-groups from rights violations and how the current IHRL framework can be repurposed and reframed to address dehumanisation as the root cause of these rights violations.

In order to provide a comprehensive picture of current IHRL practice, this article explores four IHRL treaties, and the practice of their respective monitoring bodies in relation to European States. The European Convention on Human Rights (ECHR) and the International Covenant on Civil and Political Rights (ICCPR) are generally applicable instruments that seek to prevent a range of rights violations, including those mostly obviously connected to mass atrocities, such as the right to life and the prohibition of torture. In contrast, the Framework Convention for the Protection of National Minorities (FCNM) and the International Convention on the Elimination of all Forms of Racial Discrimination (ICERD) are targeted instruments, which seek to protect the rights of out-groups. The mandates and working practices of each instrument’s monitoring mechanism notably impact their ability to address dehumanisation as a root cause of rights violations. The European Court of Human Rights (ECtHR) serves an entirely judicial function, whereas the Advisory Committee to the FCNM (AC-FCNM) is limited to a State reporting process and issuing interpretative guidance in the form of Thematic Commentaries. In contrast, the two treaty bodies, the Committee on the Elimination of Racial Discrimination (CERD) and the Human Rights Committee (HRC), consider State reports, issue interpretative guidance through General Recommendations/Comments and serve a quasi-judicial function. Nonetheless, this article asserts that it is possible for all four mechanisms considered here to establish and elaborate a positive State obligation to counter dehumanisation, albeit to varying degrees.

Following this introduction, Section 2 of this article draws on literature from Social Psychology and Genocide Studies in order to introduce the concept of dehumanisation and demonstrate how dehumanisation impacts the realisation of rights. Section 3 explores whether it is possible for IHRL to be interpreted to imply a positive State obligation to counter or prevent dehumanisation. Here it is revealed that pre-existing positive State obligations to prevent hate (and other forms of intolerant) speech and to create tolerant societies have the potential to address both implicit and explicit dehumanisation. Sections 4 and 5 analyse whether the current practice of IHRL monitoring mechanisms is sufficient to respond to the threat posed by dehumanisation to the human rights of out-groups. Section 4 focuses on whether IHRL monitoring mechanisms have sufficiently recognised that dehumanisation undermines the realisation of rights. Section 5 draws on Social Psychology, and related fields, to evaluate whether current interpretations of the positive State obligations identified in Section 3 are sufficient to prevent or counter dehumanisation and to ascertain how these interpretations can be strengthened in practice.

2 Dehumanisation as a Cause of Rights Violations

Drawing on research from Social Psychology and Genocide Studies, this section sets out the premise of this article: dehumanisation facilitates and legitimises the violation of the human rights of out-groups. Consequently, it identifies the key characteristics of dehumanisation and establishes the connection between dehumanisation and human rights violations. Examples from the AC-FCNM’s Opinions on States’ Reports are used to demonstrate the contemporary relevance of dehumanisation as a cause of human rights violations in Europe, specifically in relation to migrants, Muslims and Roma.

Dehumanisation, broadly defined, involves the categorisation of an out-group as lacking human characteristics. Categorisation does not need to be overt and explicit; it can also be unconscious and implicit. The process is closely related to phenomena including prejudice, stereotyping, othering and delegitimisation.

groups may be likened to animals, diseases or ‘superhuman creatures such as demons, monsters, and satans’. In less blatant forms of dehumanisation, the humanity of the out-group may not be denied outright. Instead the out-group will be categorised as less human than the in-group or as having undesirable characteristics (infra-humanisation). Notably, dehumanisation is observed primarily in relation to ‘low-status/disadvantaged targets’. Both blatant and less blatant forms of dehumanisation of out-groups, which fall into the category of ‘low-status/disadvantaged’, can be observed in Europe. For example, in the United Kingdom, the description of migrants as cockroaches in a tabloid newspaper was singled out for criticism by the HRC. The AC-FCNM has criticised the portrayal of Roma as ‘inadeptable’, ‘asocial’, ‘lazy’ and ‘criminal’, all of which suggest infrahumanisation. While these are all human characteristics, infrahumanisation results in these characteristics being attributed to the entire out-group rather than to individuals belonging to the out-group. Specifically, such classifications may lead an out-group to be perceived as being ‘outside the boundaries of the commonly accepted groups, and … thus excluded from the society.’ Accordingly, the AC-FCNM has expressed concern that the instrumentalisation of xenophobia by political parties has led to the stratification of society in Cyprus:

members of the predominant Greek Cypriot linguistic and religious community are viewed as “first-class citizens”, EU citizens and wealthy immigrants are regarded as coming second, and Turkish Cypriots, Roma, refugees and asylum-seekers are considered as falling into a third category.

Here, the latter category is viewed as less human than the first two categories and, therefore, as excluded from society. Similar exclusion from society has been observed by the AC-FCNM in relation to Roma, who are frequently subject to ‘social rejection’ and viewed as ‘foreigners’, and, in the Netherlands, where younger Muslims have reported feeling that ‘they are seen as members of an ethnic and religious group first and citizens of the Netherlands second’.

While for Bar-Tal, dehumanisation can occur in ‘any context of intergroup relations: international, interreligious, intercultural, or interideological’, it appears to require facilitating factors, which support the construction of the out-group as a threat to the in-group. Thus, adverse societal conditions, a perceived conflict of interests or the presence of conflict have been identified as potential motivating factors behind dehumanisation. Again, this is borne out in Europe, where migrants are currently blamed for a range of societal ills, ranging from ‘the economic situation and high unemployment’, to ‘austerity policies to public health and security’. Language that portrays migrants as an ‘alien invasion’, Roma as criminals and Muslims as terrorists serves to heighten the sense of threat. The value of dehumanisation as a concept, for the purposes of this article, derives from the social process it reveals. This perception of threat combined with the denial of the humanity of the victim out-group, allows the in-group to legitimise and rationalise human rights violations. As observed by Haslam and Loughnan ‘[d]ehumanisation has also been shown to predict forms of aggression that are perceived as reactive and retaliatory – and often righteous – by the perpetrator’. Specifically, Bar-Tal suggests that dehumanisation reduces prosocial and increases antisocial behaviour towards out-groups. The reduction of prosocial behaviour, or collective helping, has the potential to result in discrimination and reduce the mobility of dehumanised out-groups on the basis that they are perceived ‘as less worthy of help, forgiveness, and empathy’. In the case of migrants in Hungary, the perceived threat posed by immigrants to the State has been linked to a lack of support for the admission of asylum seekers.

In contrast, antisocial behaviour underpinned by the dehumanisation of the out-group is likely to include acts of aggression and punitive behaviours. Goff and others suggest that ‘[d]ehumanization is a method by which individuals and social groups are targeted for cruelty, social degradation, and state-sanctioned violence’. As a result, dehumanisation might underpin discrimination or punitive criminal justice legislation. At the extreme end of the scale, Kteily and Bruneau emphasise that the depiction of groups such as Africans, Native Americans, Tutsis, the Roma, and Jews (alongside others) as apes, savages, or vermin not only accompanied colonization, slavery, and extermination but facilitated these atrocities.

Significantly, for Stanton and Bar-Tal, dehumanisation is one stage in a larger process that facilitates the commission of mass atrocities.

In the context of Europe, both violent and non-violent anti-social behaviour has been observed by the AC-FCNM. Specifically, the AC-FCNM has linked physical attacks against Roma in the UK and Italy, ‘[t]he heinous fatal stabbing of an Eritrean man in Dresden’ and ‘physical attacks… against local reception centres for immigrants from the Middle East and Africa’ in Italy to prejudice in these societies. In Spain ‘persisting discrimination against Roma in all fields of daily life, including in private-law relations such as access to goods and services, employment or housing’ has also been linked to prejudice. Thus, the dehumanisation of out-groups has the potential to result not only in discrimination and violations of identity rights but also in the denial of core human rights found in the ECHR and ICCPR, such as the right to life and the prohibition of torture.

However, as the process of dehumanisation allows the in-group to morally legitimise these extreme behaviours, out-groups are frequently not recognised as victims of rights violations or blamed for their own treatment. Opotow explains, ‘[t]hose who are morally excluded are perceived as nonentities, expendable, or undeserving; consequently, harming them appears acceptable, appro-

not human or less human than the in-group; second, the
perception that the out-group poses a threat or under-
mines the interests of the in-group; and, finally, that
these factors are used to legitimise interferences with
the rights of the out-group. Dehumanisation not only
facilitates discrimination and violations of identity
rights but, once institutionalised, has the potential to legitimise
widespread and coordinated rights violations by organs of
the State. In Europe, the dehumanisation of Roma has
long been institutionalised in Central Europe and has legitimised discrimination, ethnic cleansing and
genocide.\textsuperscript{55} While the dehumanisation of migrants and
Muslims is less ingrained, it is increasingly institutional-
is – most clearly, in Hungary.\textsuperscript{56} If IHRL law is to
achieve its purpose, then IHRL monitoring mechanisms
must recognise that dehumanisation underpins violations of
the rights of these out-groups.

3 A Positive State Obligation to Counter Dehumanisation under IHRL

Dehumanisation is a social process that is reinforced by
interactions at an institutional, societal and individual
level. As identified earlier, prior to giving rise to rights
violations, dehumanisation requires the categorisation of
out-groups as not human or less human than the in-
group alongside the categorisation of out-groups as a
threat to the interests of the in-group. However, it is not
clear whether IHRL is equipped to counter the social
processes behind dehumanisation. While dehumanisation
undermines the realisation of rights, the social pro-
cesses underpinning it are not necessarily rights viola-
tions in themselves, for example, the categorisation of
out-groups may be unconscious or unspoken. Thus, it is
not enough for IHRL to simply require that States
refrain from actively violating rights. If dehumanisation
is to be addressed, IHRL must require that States adopt
positive measures to disrupt the process of dehumanisa-
tion at a societal level. Specifically, they must seek to
change societal attitudes towards out-groups.

The existence of positive obligations derived from
IHRL treaties has been clearly established by their mon-
itoring mechanisms and in academic literature.\textsuperscript{57} Nota-
biy, within the UN system, States are under an obli-
gation not only to respect rights by not actively violating
them, but also to protect individuals from rights viola-
tions perpetrated by private actors. Specifically, the
HRC’s General Comment No. 31 establishes that States
must ‘take appropriate measures or to exercise due dili-
gence to prevent, punish, investigate or redress the harm
caused by such acts by private persons or entities’
[emphasis added].\textsuperscript{58} If States are ‘to prevent... the
harm’, then it follows that they must adopt measures to
challenge the root causes of this harm. This interpreta-
tion is supported by the UN’s ‘respect, protect, fulfil’
framework: the obligation to fulfil requires that States
proactively adopt measures to facilitate ‘the full realiza-
tion of rights’.\textsuperscript{59} Similarly, the ECtHR has emphasised
that ‘the Convention is intended to guarantee not rights
that are theoretical or illusory but rights that are practi-
cal and effective’,\textsuperscript{60} in order to legitimise reading posi-
tive State obligations into the ECHR.\textsuperscript{61} As dehumanisa-
tion is a root cause of rights violations perpetrated
against out-groups, it follows that States must counter
or prevent dehumanisation in order to both protect out-
groups from private actors and fulfil their human rights
obligations by removing obstacles to the realisation of
rights.

However, the substance of States’ positive obligations
differs between instruments and between rights. As a
result, this section establishes the scope of States’ posi-
tive obligation to prevent or counter dehumanisation
under the ECHR, FCNM, ICCPR and ICERD. Nota-
biy, while an explicit obligation to counter or prevent
dehumanisation has not been recognised, all four instru-
ments establish two types of positive obligations that, in
combination, have the potential to serve the same pur-
pose: the obligation to prevent intolerant and/or hate
speech and the obligation to create tolerant societies.

The categorisation of out-groups as not human or less
human than the in-group is central to the process of
dehumanisation. While not all forms of categorisation
are explicit or overt, when they are, it is possible for
States to intervene by prohibiting forms of expression
that categorise the out-group. Article 6(2) FCNM and
Article 20(2) ICCPR both establish a positive obligation
for States to prevent ‘discrimination, hostility or vio-
ience’ motivated by the identity of the out-group. While
the ICCPR explicitly requires that incitement to such
acts ‘shall be prohibited by law’, the FCNM requires
that States ‘take appropriate measures to protect’, allow-
ing space for broader measures at a societal level to
address the root causes of hate speech. In contrast,
although ICERD does not expressly establish a positive
obligation to prevent hate speech, this obligation has
been read into the Convention by the CERD.\textsuperscript{62}
Signifi-

cantly, in elaborating the content of this positive obli-
gation, all three bodies have focused on ensuring the

\end{itemize}
accountability of perpetrators of hate speech, hate crimes or discrimination, through appropriate legal frameworks, prosecution and punishment. The ECHR does not contain a provision that expressly requires that States adopt positive measures to give effect to their rights obligations. However, in practice, the ECtHR has pointed to Article 1 ECHR, which requires that States 'secure to everyone within their jurisdiction the rights and freedoms' [emphasis added], in conjunction with substantive convention rights as the basis of positive obligations. While the ECtHR initially focused on legislative change when elaborating the content of States’ positive obligations under the Convention, it has increasingly read a variety of positive obligations into almost all of the Convention rights. Thus, although no express obligation to prevent hate speech exists in the ECHR, the ECtHR has established that as a matter of principle it may be considered necessary in certain democratic societies to sanction or even prevent all forms of expression which spread, incite, promote or justify hatred based on intolerance.

Further, in the case of Karaahmed v. Bulgaria, while the ECtHR accepted that an appropriate legal framework existed, the failure to investigate instances of hate speech that incited violence against a religious community amounted to a violation of Article 9 ECHR. Thus, a positive obligation exists under the ECtHR for States to ensure not only that hate speech is prohibited in law but also that this law is implemented in practice. These positive obligations have the potential to both protect out-groups from rights violations perpetrated by individuals and prevent additional violations that are legitimised by the explicit dehumanising portrayal of the out-group. However, legal regulation alone is insufficient to address the societal causes of rights violations.

Significantly, while all four bodies have focused on the legal prohibition of hate speech, they have also suggested that States are under a positive obligation to attempt to address the societal root causes of such speech. Thus, the AC-FCNM, CERD and HRC have all advised that States should introduce ‘awareness-raising campaigns’, as part of their strategy to address hate and other forms of intolerant speech. Similarly, in Nachova and Others v. Bulgaria, the ECtHR established that the authorities must use all available means to combat racism and racist violence, thereby reinforcing democracy’s vision of a society in which diversity is not perceived as a threat but as a source of enrichment [emphasis added].

Thus, it appears that a positive obligation exists under the ECtHR, FCNM, ICCPR and ICERD for States to adopt not only legal measures to prohibit hate speech but also non-legal measures to counter the societal attitudes that underpin such hate speech. However, the categorisation that underpins dehumanisation is not always articulated through speech. Stereotypes may be so ingrained that they no longer require articulation. Further, implicit or even unconscious forms of categorisation may legitimise structural discrimination or undermine the realisation of the rights of out-groups. If implicit categorisation is to be addressed, then measures are required to challenge societal attitudes towards out-groups, more generally. Significantly, under all four instruments, States are also under a general obligation to create tolerant societies. For example, Article 6(1) FCNM requires that States parties ‘encourage a spirit of tolerance and intercultural dialogue’ and ‘take effective measures to promote mutual respect and understanding and co-operation among all persons living on their territory’. In interpreting the purpose of Article 6(1) FCNM, the AC-FCNM has established that States should ‘enhance the majority population’s openness towards diversity’, promote ‘an overall positive attitude towards diversity and societal integration’, and equip their populations ‘with the knowledge and understanding to identify and combat intolerance and prejudice’.

Similarly, Article 2 ICERD requires that States adopt ‘other means of eliminating barriers between races, and … discourage anything which tends to strengthen racial division’ [emphasis added]. Further, Article 7 ICERD requires that States ‘adopt immediate and effective measures, particularly in the fields of teaching, education, culture and information’ [emphasis added]. Notably, the text of Article 7 ICERD not only requires that States seek to change societal attitudes in order to counter existing racial discrimination but also establishes that such measures must be pre-emptive insofar as they must be adopted ‘with a view to combating prejudices which lead to racial discrimination’ [emphasis added]. Through its Concluding Observations on State Reports, the CERD has emphasised that the purpose of these provisions is to ‘combat stereotypes’,77 ‘promote tolerance and understanding…’78 and ‘address the root causes of prejudices’.79

In contrast to the targeted instruments, the ICCPR does not contain a provision that expressly requires that States adopt positive measures to create tolerant societies. However, Article 2(2) ICCPR explicitly requires that States ‘adopt such laws or other measures as may be necessary to give effect to the rights’ [emphasis added]. This suggests that the drafters foresaw the need for States to adopt a range of positive measures, beyond the adoption of legislation, to give full effect to the provisions of the treaty. The text of the preamble to the ICCPR recognises that it is not enough for rights to be enshrined in law, but that they ‘can only be achieved if conditions are created’, suggesting that societal change may be necessary if these rights are to be enjoyed in practice. Further, Article 2(1) ICCPR requires that States ‘undertake to respect and ensure to all individuals within its territory and subject to its jurisdiction the rights recognized in the present Covenant, without distinction of any kind’. Here ‘ensure’ has been interpreted by the HRC to require proactive steps by the State to prevent human rights violations by private persons,80 an interpretation that also aligns with the ‘respect, protect, fulfill framework’.81 Through its practice, the HRC has reaffirmed this interpretation by elaborating the content of a positive obligation for States to address intolerance and prejudice. Much like the AC-FCNM and CERD, the HRC has required that States adopt positive measures to ‘promote tolerance and respect for diversity’, 82 ‘respect for human rights’83 and to ‘eradicate stereotyping and discrimination’.84

Finally, while no explicit obligation to foster tolerant societies exists under the ECHR, Lavrysen has identified a ‘cluster of cases … where the Court has imposed obligations on the State under a variety of Convention provisions to act as a guarantor of pluralism within society’.85 Specifically, the ECtHR has recognised that States have a positive obligation to address the societal causes of rights violations, insofar as ‘[t]he role of the authorities is not to remove the cause of tension by eliminating pluralism, but to ensure that the competing groups tolerate each other’.86 Further, in S.A.S. v. France, the ECtHR emphasised that the State ‘has a duty … to promote tolerance’.87 This again suggests that in order to discharge their duties under the ECHR, States are under a positive obligation to adopt non-legal measures to foster tolerant societies.

Under all four treaties considered here, a positive State obligation to counter or prevent dehumanisation has not been recognised. However, States are under a positive obligation to adopt effective legal and societal measures to prevent hate speech. This has the potential to reduce dehumanisation, by limiting forms of expression that overly categorise out-groups and by signalling that such categorisation is unacceptable at a societal level. Further, the obligation to take measures to foster tolerant societies establishes an obligation for States to address the root causes of intolerance, including implicit or unconscious forms of categorisation.

These positive obligations are more clearly articulated in the text of some instruments than others. Further, the mandates of their respective monitoring bodies have impacted their ability to elaborate positive State obligations. Through the State reporting processes as well as the adoption of General Comments or Thematic Commentaries, the AC-FCNM, CERD and HRC have been able to elaborate the measures that States are required to take in order to prevent rights violations. In contrast, as a court, the ECtHR is limited to hearing the facts of the case before it, after the alleged violation has occurred. As a result, it does not serve the same preventative function as the other mechanisms considered here. Nonetheless, the two identified positive obligations allow all four mechanisms to require that States adopt measures to

address dehumanisation as a root cause of rights violations, albeit to varying degrees.

4 Recognising Dehumanisation as a Cause of Rights Violations in Practice

This article has identified that under IHRL, States are under a positive obligation to both address hate speech and create tolerant societies. This should allow IHRL monitoring mechanisms to not only require that States counter dehumanisation but to also elaborate the content of this obligation, through their monitoring practice. However, if they are to do so, these mechanisms must first recognise that dehumanisation undermines the realisation of rights. While these mechanisms have not expressly engaged with dehumanisation as a concept, it is possible to ascertain the extent to which they have engaged with the factors that contribute to dehumanisation. This section thus focuses on the extent to which the AC-FCNM, CERD, ECHR and HRC have expressed concern about the explicit categorisation of out-groups through hate speech and related phenomena such as prejudice, intolerance and stereotyping as well as the explicit portrayal of the out-group as a threat. Further, the extent to which these mechanisms have connected the categorisation of out-groups, including implicit and unconscious categorisation, to other human rights violations reveals whether they recognise dehumanisation to be a cause of rights violations. The practice of these mechanisms is again illustrated with reference to the situation of migrants, Muslims and Roma in Europe.

As has been illustrated earlier, the AC-FCNM has consistently expressed concern at the treatment of migrants, Muslims and Roma in Europe. It has explicitly identified discourse that stigmatises or stereotypes minorities as problematic and has expressed concern at the increased acceptability of xenophobic discourse and the role of mainstream media and politicians in spreading intolerant and racially hostile narratives. In so doing, the AC-FCNM has identified the danger of not only hate speech but also the role that ‘stigmatisation and stereotyping’ plays in feeding hostility towards out-groups. Furthermore, the AC-FCNM has recognised that minorities may be scapegoated with the aim of ‘nurturing and instrumentalising xenophobic sentiments in the population’ or for political gain.

Significantly, the AC-FCNM has expressed concern about the impact of these forms of categorisation on broader societal conditions and, specifically, the potential for them to impact out-groups’ enjoyment of rights. Thus, it has highlighted the impact of xenophobia and intolerance on ‘society’s understanding of minority identities and issues’, ‘a climate in which Muslims and persons with a migration or minority background feel unsafe’, as well as ‘an attitude of impunity in which the far right extremists feel emboldened to stage anti-Roma demonstrations and physical attacks’. All of this has been explicitly connected by the AC-FCNM to rights violations, including hate crime, discrimination and access to rights, including freedom of religion or belief. Furthermore, the AC-FCNM has identified how xenophobia and the construction of out-groups as a threat combine in order to legitimise rights violations:

Anti-gypsyism and Islamophobia are reported to be growing in particular on social media, and the negative public debate fed by stereotypes and the construction of enemy images has also led to more frequent violent attacks.

Thus, through its practice, the AC-FCNM has identified explicit dehumanisation as a cause of rights violations. However, it tends not to engage with the impact of unconscious or implicit categorisation on the realisation of rights. This is perhaps because it is much easier to identify the resultant rights violations than it is to identify implicit or unconscious categorisation as their underlying cause.

Although the CERD, like the AC-FCNM, is a targeted mechanism, its approach to dehumanisation aligns more closely with that of the HRC. The Concluding Observations of the CERD and HRC since 2015 reveal that both treaty bodies recognise express forms of categorisation, such as hate speech and intolerant speech, as constituting rights violations, especially when such speech is linked to hate crime. Thus, in relation to Switzerland, the HRC expressed concern ‘about the increasing prevalence of hate speech and acts of hatred against the Muslim, Jewish and Roma communities’. Similarly, in relation to Poland, the CERD expressed concern at ‘the prevalence of racist hate speech against minority groups … which fuels hatred and intolerance’.

While both bodies tend to focus on speech that meets the threshold

of hate speech, they have also suggested that less explicit forms of categorisation such as stereotyping, prejudice, stigmatisation and ‘chronic negative portrayal’ constitute rights violations. The proliferation of hate and intolerant speech by the media and politicians has been singled out as particularly problematic by both treaty bodies. Significantly, both mechanisms have explicitly recognised that hate speech may result in human rights violations, insofar as it legitimises hate crime, violence and ‘acts of intimidation’ towards out-groups. Further, the CERD has recognised that hate speech serves the function of excluding out-groups from societal membership, a practice that is recognised by social psychologists as legitimising hate crime, violence and human rights violations. For example, in relation to Sweden, the CERD mentioned ‘stereotypical representation of Muslims’, ‘reports of racist hate crimes and hate speech against Muslim ethno-religious minority groups’, ‘reports of attacks against mosques’ and ‘difficulties … in accessing employment and housing outside of minority-populated areas’. This suggests that the CERD is aware that these are not unrelated issues, but it does not expressly connect the rights violations with the underlying cause. However, in other instances, these mechanisms have failed to connect this connection even when societal debates surrounding the adoption of laws that violate rights, such as bans on building minarets or wearing religious clothing, have explicitly categorised out-groups. This is significant, as only when this link is made implicitly, insofar as the negative portrayal of an out-group is mentioned in the same paragraph as other rights violations. For example, in relation to Sweden, the CERD mentioned ‘stereotypical representation of Muslims’, ‘reports of racist hate crimes and hate speech against Muslim ethno-religious minority groups’, ‘reports of attacks against mosques’ and ‘difficulties … in accessing employment and housing outside of minority-populated areas’. This suggests that the CERD is aware that these are not unrelated issues, but it does not expressly connect the rights violations with the underlying cause. However, in other instances, these mechanisms have failed to connect this connection even when societal debates surrounding the adoption of laws that violate rights, such as bans on building minarets or wearing religious clothing, have explicitly categorised out-groups. This is significant, as only when this link is made implicitly, insofar as the negative portrayal of an out-group is mentioned in the same paragraph as other rights violations. whose rights must give way to immigration control or the economic well-being of the State. This has led scholars to criticise the ECtHR for endorsing the portrayal of migrants as less human than citizens and, therefore, for accepting that migrants do not have the same entitlement to rights as members of the in-group. Similarly, the ECtHR has been accused of relying on stereotypes of Islam and of unfavourably comparing Islam and, by extension, Muslims with ‘European values’ and ‘Europeans’, in order to legitimise not finding a violation of the applicant’s rights under Article 9 ECHR. For example, the ECtHR has accepted that the visible presence of Islam poses a threat to the in-group, insofar as it has a ‘proselytising’ effect, challenges the secular foundations of the State and undermines societal cohesion. Thus, by accepting the in-group’s portrayal of Muslim applicants as less human and, therefore, as less deserving of rights, the ECtHR has not only failed to recognise the connection between categorisation and the realisation of rights but has also participated in this process. Nonetheless, in S.A.S. v. France, concerning the so-called French ‘burqa ban’, the ECtHR did express concern at the institutionalisation of dehumanisation, insofar as a State which enters into a legislative process of this kind takes the risk of contributing to the consolidation of the stereotypes which affect certain categories of the population and of encouraging the expression of intolerance, when it has a duty, on the contrary, to promote tolerance.

However, by deferring to the State through the margin of appreciation in this case, the ECtHR signalled its unwillingness to challenge the majority’s perception of threat and effectively endorsed the dehumanisation of the Muslim applicant.

In contrast to its treatment of migrants and Muslims, the ECtHR has explicitly recognised that travellers and Roma may be subject to rights violations as a direct result of intolerance and prejudice linked to their identity. Nonetheless, the ECtHR has historically been slow to recognise that violations of the rights of Roma or traveller applicants are enabled by widespread dehumanisation, in the absence of explicit articulations of discriminatory motives. While more recently, the ECtHR has begun to identify violations of Article 14 ECHR, the prohibition of discrimination, in cases concerning Roma, its approach has been inconsistent. Thus, in V.C. v. Slovakia, concerning the forced sterilisation of a Roma woman, the ECtHR found a violation of Articles 3 and 8, but not Article 14 ECHR as it was unconvinced ‘that it was part of an organised policy or that the hospital staff’s conduct was intentionally racially motivated’. Despite a wealth of evidence from the AC-FCNM, CERD and HRC and a dissenting opinion of Judge Mijovic, which emphasised that this was a specific issue faced by Roma women in Slovakia that had been legitimised by the broader societal context, the ECtHR failed to recognise the role played by dehumanisation in this rights violation. By individualising human rights violations committed against Roma, the ECtHR fails to recognise that the implicit categorisation of this out-group by the broader society underpins individual rights violations.

Thus, while the AC-FCNM, CERD and HRC have recognised that the explicit categorisation of out-groups results in rights violation, the ECtHR has not only failed to recognise the significance of dehumanisation but has also contributed to this process itself. To some extent, this pattern can again be attributed to the mandates and working methods of these mechanisms. The AC-FCNM, CERD and HRC all monitor State reports, a process that allows them to obtain a broad understanding of the situation prevailing in a State and how this pertains to the realisation of the rights of out-groups.

This facilitates the identification of dehumanisation at a societal and institutional level. In contrast, as the ECtHR does not monitor State reports, its competence is restricted to the facts of the case before it. As the facts of the case are, inevitably, individualised, this restricts the ECtHR’s ability to identify whether the interference with the applicant’s rights was a result of the dehumanisation of the out-group.

However, in *D.H. and others v. the Czech Republic*, the ECtHR demonstrated that it is able to find a violation of Article 14 ECHR, when the facts of the case before it form part of a broader pattern of discrimination or intolerance against an out-group. Thus, moving forward, there are opportunities for the ECtHR to strengthen its work in this area. The ECtHR could, for example, solicit information from third party interveners in order to inform its decisions in cases where broader societal intolerance appears to have undermined access to rights, rather than individualising violations that are clearly structural. The ECtHR could also, through obiter dicta, engage with the impact of dehumanisation on the realisation of rights and more clearly establish the scope of States’ positive obligation to counter such dehumanisation. Further, States are frequently afforded a margin of appreciation in cases concerning the rights of persons belonging to minorities. The ECtHR could make recognition of this margin of appreciation contingent on the State’s compliance with its positive obligation to foster tolerant societies, in cases where patterns of discrimination or intolerance appear to underpin the interference with the applicant’s rights or where the actions of the State have increased intolerance towards out-groups, as the ECtHR explicitly recognised in *S.A.S. v. France*.

Despite the existence of positive States obligations to prevent hate speech and to foster tolerant societies under all instruments, the IHRL mechanisms explored in this section have yet to fully appreciate the impact of dehumanisation on the realisation of rights. In particular, while they are aware of the connection between hate speech and hate crime, they are much less aware of the impact of categorisation on a wider range of rights, especially when categorisation is implicit or unconscious. This directly impacts whether the recommendations of these mechanisms require that States address dehumanisation as a cause of rights violations. Consequently, if IHRL is to achieve its purpose and protect out-groups from rights violations, then IHRL monitoring bodies must explicitly recognise the root causes of these violations.

5 The Content and Scope of a Positive State Obligation to Counter Dehumanisation

Under IHRL, States are required to both adopt measures to restrict forms of speech that facilitate dehumanisation and address the societal intolerance that underpins dehumanisation. However, in practice, IHRL monitoring mechanisms have yet to fully appreciate the impact that dehumanisation has on the realisation of rights. Drawing on social psychology and related fields, this section analyses whether monitoring mechanisms’ interpretation of the scope of States’ obligations to prevent hate and/or intolerant speech and to create tolerant societies is sufficient to counter dehumanisation as a cause of rights violations. Further, it identifies how the current practice of these mechanisms can be strengthened in order to encourage States to adopt a more robust response to dehumanisation. Significantly, despite the existence of these obligations under the ECHR, in practice, the ECtHR has rarely found a violation in cases where the State has failed to ensure tolerance of out-groups and has not elaborated the content of these obligations. Consequently, this section focuses exclusively on the practice of the AC-FCNM, CERD and HRC. It is revealed that while a comprehensive interpretation of States’ obligation to prevent hate and/or intolerant speech has been developed by these mechanisms, they must elaborate the substance of the obligation to create a tolerant society in more detail, if States are to effectively counter dehumanisation.

5.1 Preventing Hate and/or Intolerant Speech

Intolerant speech, including hate speech, explicitly categorises out-groups. Further, it has the potential to reinforce and strengthen the dehumanisation of out-groups, particularly when such expressions are legitimised by those with authority, either expressly, through repetition, or implicitly, by failing to condemn. Consequently, reducing the space for intolerant speech in the public sphere has the potential to reduce the dehumanisation of out-groups. The AC-FCNM, CERD and HRC have identified two main components of the positive obligation to prevent intolerant and/or hate speech: first, an obligation to adopt effective laws to prohibit hate speech, and, second, an obligation to regulate the speech of individuals who have the ability to influence public opinion, such as politicians and the media. In developing the content of these obligations, the three mechanisms have provided States with specific guidance and have sought to balance the need to restrict hate speech with the needs of democratic society.

Stephanie Eleanor Berry

doi: 10.5553/ELR.000161 - ELR July 2020 | No. 3
At the most fundamental level, the AC-FCNM and CERD have stressed that States must ensure that domestic legislation prohibiting hate speech is comprehensive and is implemented in practice through proper investigation, prosecution and sanctions. Beyond this basic standard, the AC-FCNM and CERD have emphasised that law enforcement, prosecutors and the judiciary should receive appropriate and regular training to ensure the effectiveness of these laws. In order to improve reporting, States should seek to raise out-groups’ awareness of the existence of hate speech legislation and improve trust between out-groups and law enforcement authorities, including by increasing diversity in the police force. Thus, in addition to adopting laws to prohibit hate speech, monitoring mechanisms have also required that States ensure these laws are effective in practice.

The AC-FCNM, CERD and HRC have also required that States adopt measures to reduce the impact of hate or intolerant speech by those who have the potential to influence public opinion. As noted by Donohue, ‘[c]learly, public language matters; it creates a context for how people interact with one another’. Here, the media and politicians have the potential to lead public opinion in a way that individual acts of intolerance do not. Within social psychology and genocide studies, both the media and the politicians have been recognised as playing a key role in the dehumanisation of out-groups and have been implicated in the commission of mass atrocities. Thus, it is clear that if IHRL is to achieve its purpose, politicians and the media cannot be permitted to spread hate or intolerance without intervention. However, IHRL – particularly in Europe – is premised on the understanding that democracy and human rights are mutually reinforcing. Given the central role that politicians and the media play in ensuring effective democracy, the regulation of hate and intolerant speech is a complex area for IHRL mechanisms to navigate. Significantly, CERD has sought to adopt a nuanced approach and has explicitly acknowledged that whether speech constitutes hate speech is context specific and that factors including ‘the economic, social and political climate’, ‘the position or status of the speaker’, and ‘the reach of the speech’ must be taken into account.

The AC-FCNM and CERD have both emphasised the need for the authorities to publicly condemn acts of hate speech and related phenomena such as racist propaganda and ‘derogatory and intolerant language’, particularly when perpetrated by politicians or others in the public eye. Such condemnation serves to prevent intolerant speech from being normalised in society through the silence or acquiescence of those in authority. Further, if the authorities challenge the categorisation of the out-group, this also has the potential to break the recursive cycle whereby society and the public authorities legitimise the adoption of increasingly extreme measures in response to a perceived threat posed by out-groups. Significantly, both the AC-FCNM and CERD have recognised that such condemnation is a necessary component of ‘promoting a culture of tolerance and respect’, thus reaffirming the mutually reinforcing nature of measures to restrict the impact of hate speech and measures to foster tolerance.

Beyond condemnation, both the AC-FCNM and CERD have recommended that States adopt measures to restrict hate and intolerant speech in political discourse and the media. In relation to hate speech in political discourse, the AC-FCNM has asked States to call ‘on all political parties to refrain from using it and take steps ‘to combat stereotypes and prejudice in political discourse’. Similarly, the CERD has asked that the authorities ‘call upon politicians to ensure that their public statements do not contribute to intolerance, stigmatization or incitement to hatred’. Further, the
CERD has explicitly emphasised the need to apply legislation on hate speech to politicians and public officials. Significantly, neither mechanism has required that States legislate to prohibit forms of intolerant political speech that do not meet the threshold of hate speech but, nonetheless, have the potential to categorise out-groups.

This is perhaps where these mechanisms have sought to strike a balance between protecting out-groups from speech that categorises, on the one hand, and allowing space for democratic debate, on the other. The prohibition of forms of speech that the in-group perceives to be legitimate would not only remove the opportunity for such ideas to be contested but would also run the risk of reducing confidence in the democratic process. Once dehumanisation has been institutionalised and/or normalised in political discourse, as it has in many European States, then the in-group is unlikely to respond positively to the condemnation of speech that it perceives to be legitimate. This is because, as noted by Haslam and Loughnan, ‘people actively resist information that challenges them’ and the self-identification of the in-group is based on negative comparisons with the out-group. Consequently, the condemnation of intolerant speech in public discourse is more likely to be effective if it is adopted to prevent rather than counter dehumanisation.

Both the AC-FCNM and CERD have expressed concern that the portrayal of minorities by the media has the potential to perpetuate intolerance. Media expressions that negatively categorise out-groups but do not constitute hate speech pose particularly complex issues for monitoring mechanisms. Thus, the AC-FCNM and CERD have emphasised the need for media professionals to undertake training to improve reporting on minority groups and diversity. While both bodies have recognised the need for some form of press regulation, the AC-FCNM has emphasised that measures should not impact the freedom or independence of the press. In contrast, the CERD has recommended formal regulatory measures, through legislation, professional codes of conduct or professional ethics and media supervisory mechanisms. However, some forms of reporting that reinforce negative stereotypes tend to avoid regulation, for example when newspapers report only the ethnicity of minority criminals. In this respect, rather than formal regulation, the CERD has suggested that ‘[m]edia should avoid referring unnecessarily to race, ethnicity, religion and other group characteristics in a manner that may promote intolerance’. Further, the AC-FCNM has called on the authorities in the UK to engage with media outlets to promote a more nuanced understanding and reporting of facts to avoid fuelling intolerant and ethnically hostile behaviour while promoting the use of less derogatory language.

While this is a complex area for IHRL monitoring mechanisms to navigate, the AC-FCNM and CERD have clearly sought to balance the need to counter dehumanisation with the requirements of a democratic society. These mechanisms have sought to develop precise and nuanced guidance for States that requires the prohibition of hate speech but also recognises the dangers of the over-regulation of intolerant speech, especially if the negative categorisation of out-groups is already ingrained within society.

### 5.2 Creating Tolerant Societies

While regulation and condemnation have the potential to reduce the influence of speech that categorises, they do not address the societal root causes of dehumanisation nor do they address implicit or unconscious categorisation. In order to address these issues, States must seek to change societal attitudes and create societies that are tolerant of diversity. Significantly, the AC-FCNM, CERD and HRC have recommended that States adopt measures to address the societal root causes of hate speech as well as other forms of intolerant speech through, for example, ‘awareness-raising campaigns’. IHRL also establishes a positive State obligation to create tolerant societies. This section draws on social psychology, and the related fields of interculturalism and genocide studies, in order to analyse whether IHRL mechanisms’ interpretation of States’ positive obligation in this respect is sufficient to improve societal tolerance and, thereby, reduce the dehumanisation that legitimises rights violations.

During State reporting processes, the AC-FCNM, CERD and HRC have frequently recommended that States ‘promote tolerance and understanding’ or develop integration policies and strategies, without elaborating what this entails in practice. More specific recom-

recommendations focus on the adoption of awareness-raising activities and educational campaigns to promote tolerance or eliminate prejudice and counteract stereotypes. However, these recommendations tend not to elaborate the form such activities should take. The most detailed guidance provided by the AC-FCNM and CERD concerns the design of inclusive education curricula to increase knowledge of the history and culture of out-groups. For example, the CERD has required that Italy ‘ensure that the school curriculum includes the history of the State party’s colonial past in order to convey the consequences and the continued impact of racially discriminatory policies’. From the perspective of social psychology, while inclusive school curricula and public awareness campaigns have the potential to improve societal cohesion, they are insufficient to create tolerant societies. This is because knowledge alone is unlikely to counter dehumanisation, especially if groups tend not to interact with one another or when such interactions are primarily negative. If the out-group has already been dehumanised, the in-group is likely to view stereotypes as legitimate, not see the need to address intolerance against out-groups, and/or have a vested interest in the negative categorisation of the out-group. In this case, the in-group is unlikely to engage with educational activities that actively challenge their beliefs. Consequently, measures that seek to counter pre-existing dehumanisation are less likely to be successful than measures that seek to prevent dehumanisation in the first place. In order to counter pre-existing dehumanisation, IHRL mechanisms must adopt more robust recommendations that require that States combine educational measures with more wide-ranging measures designed to create tolerant societies.

Building on Allport’s Contact Theory, social psychologists and interculturalists have suggested that increased interactions between different societal groups, with the aim of developing affective ties and intergroup friendship, are necessary to reduce the prejudice that underpins dehumanisation. Similarly, within genocide studies, Donohue highlights the potential for everyday interactions in the workplace to reduce dehumanisation: ‘[u]nderlying these efforts could also be attempts to initiate dialogue groups that allow individuals from different sides to simply become more comfortable with one another’. The cohesion strand of interculturalism likewise requires the creation of spaces and opportunities for intercultural interactions to take place and the removal of barriers to successful interactions, with the aim of breaking down ‘prejudices, stereotypes and misconceptions of others’ and generating ‘mutual understanding, reciprocal identification, societal trust and solidarity’. Notably, monitoring mechanisms have been able to interpret States’ positive obligation to create tolerant societies to encompass an obligation to foster affective ties and intergroup friendships. While ‘awareness-raising activities’ have been the default recommendation of monitoring mechanisms, both the AC-FCNM and CERD have occasionally highlighted the need for States to facilitate interactions between different groups in society through ‘trust-building activities’ and the creation of platforms to facilitate dialogue between different groups. Further, in the educational setting, the AC-FCNM has emphasised the importance of ‘bringing together pupils’ from different backgrounds and organising ‘classes and school activities in ways that facilitate intercultural exchanges and the development of friendships’. It has also highlighted examples of best practice during the State reporting process, such as the ‘BookEdu’ programme in Copenhagen, which promotes intercultural dialogue in schools. These activities have the potential to facilitate meaningful contact between the in-group and out-groups. However, these recommendations are rare, and when they are made, the terminology used, such as ‘trust building exercises’, is

vague. Guidance for States is specifically needed because the in-group is likely to resist measures that aim to facilitate intergroup contact if they perceive that the out-group poses a threat to its well-being. If participation in intercultural activities is not voluntary and does not respect the rights of all members of society, including freedom of association, it risks breeding resentment and becoming counterproductive. Further, if measures to facilitate intercultural contact are to be successful, IHRL mechanisms must require that States address structural discrimination. Interculturalists have emphasised that structural discrimination poses barriers to successful interactions, by reducing the opportunities for everyday interactions between the in-group and out-groups. Desegregation in the educational context has the potential to facilitate interactions between pupils of different backgrounds and presents the opportunity for sources of intergroup tension to be directly addressed. Significantly, both the AC-FCNM and CERD have consistently highlighted the need for States to adopt a range of measures to tackle societal segregation, specifically in relation to Roma in the context of education, employment and housing, under rights relating to non-discrimination, equality and education. Significantly, neither body has recognised the central role played by measures to counter segregation and structural discrimination in fostering societal tolerance. Nonetheless, the elaboration of States’ obligations in this respect has the potential to facilitate the creation of tolerant societies. However, there is a danger that measures intended to remove structural disadvantage by creating mixed neighbourhoods, for example, run the risk of serving an assimilatory function and violating the rights of out-groups. Notably, this appears to have been anticipated by the AC-FCNM and CERD, insofar as they have emphasised that States must consult with out-groups in the development of policies or strategies that pertain to their own social inclusion. Finally, Haslam and Loughnan suggest that a ‘way to reduce dehumanization is to promote a common or superordinate identity, thereby emphasizing the similarities and shared fate of different subgroups and de-emphasizing their boundaries’. As the creation of a common identity aims to reduce prejudice, it is possible for this to fall within States’ positive obligation to create tolerant societies. However, national identity is often a politically sensitive subject, especially if the in-group believes that the out-group poses a threat to its cultural existence. Thus, official attempts to create an inclusive identity may be viewed as a threat to national identity, heighten the sense of threat that underpins dehumanisation and may even be counterproductive. It is, then, perhaps unsurprising that IHRL mechanisms have rarely recommended that States seek to create an inclusive identity, with the exception of the AC-FCNM in relation to Moldova. Here, the AC-FCNM recommended that the authorities implement a long-term strategy for the formation of a civic identity that is inclusive and firmly based on respect for ethnic and linguistic diversity as an integral part of Moldovan society [emphasis added].

It is, however, possible for IHRL mechanisms to recommend less divisive measures that, nonetheless, have the potential to facilitate the creation of an inclusive superordinate identity. Here, interculturalist Zapata-Barrero suggests ‘redesigning institutions and policies in all fields to treat diversity as a potential resource and a public good, and not as a nuisance to be contained’. Notably, both the AC-FCNM and CERD have recognised the potential for the public authorities to develop a ‘positive political culture’ and send a positive message about diversity. Further, the AC-FCNM has recommended that States seek to create a sense of societal belonging for all groups and adopt strategies to ensure the integration of society as a whole, rather than focusing only on the integration of out-groups. It has also stressed the importance of an inclusive public discourse for both negotiating space for diversity within society and ensuring that such negotiations do not become a source of conflict. Thus, a number of the measures suggested by the AC-FCNM have the potential to create an inclusive superordinate national or civic identity, but its measured approach has the potential to offset the divisiveness of the subject.

The AC-FCNM and CERD have recognised that a range of measures are required to create tolerant societies. While their recommendations broadly correspond with those identified within social psychology and interculturalism, these recommendations must be strengthened if dehumanisation is to be successfully countered. Specifically, monitoring mechanisms must explicitly recognise that educational measures alone are insufficient to foster a tolerant society. Recommendations should regularly emphasise that education must be bolstered with measures to facilitate intercultural dialogue alongside measures to create an inclusive superordinate identity. Barriers to tolerance, such as structural discrimination, must be removed as part of these efforts. Significantly, the AC-FCNM has elaborated the content of States’ positive obligation to foster a tolerant society in the most detail. This can be attributed to the existence of an explicit obligation in Article 6(1) FCNM but also to the fact that its Opinions on State Reports are far more detailed than Treaty Bodies’ Concluding Observations. However, if dehumanisation as a root cause of rights violations is to be successfully addressed and IHRL is to achieve its purpose, then all IHRL monitoring mechanisms must urgently develop their practice in this area. The potential for the ECtHR to elaborate the content of a positive obligation to foster tolerant societies has been considered above. However, the other three IHRL monitoring mechanisms considered here serve a more preventative function than the ECtHR, and as a result have greater opportunities to elaborate the content of this obligation through State reporting processes and General Comments/Recommendations or Thematic Commentaries. While it is not the role of IHRL monitoring mechanisms to prescribe how States meet their obligations, these three mechanisms can provide detailed, non-prescriptive, guidance for States that draw on best practices and elaborate the purpose of different types of activities and the prerequisites for their success. This guidance is all the more important as agents of the State frequently perpetrate or are complicit in rights violations that are underpinned by the dehumanisation of the out-group. States should be given discretion regarding how they meet their obligation to create tolerant societies, not if.

6 Conclusion

Dehumanisation requires the categorisation of an out-group as not human or less human than the in-group and as a threat to the in-group. This serves to legitimise the violation of the rights of the out-group. These rights violations are not limited to hate speech, acts of discrimination and violations of identity rights but also extend to the commission of mass atrocities. By adopting the lens of dehumanisation, this article has demonstrated that if IHRL is to achieve its purpose, it is imperative that all IHRL monitoring mechanisms seek to address dehumanisation as a root cause of rights violations. To date, IHRL monitoring mechanisms have insufficiently recognised that dehumanisation undermines the realisation of rights, particularly when dehumanisation is implicit or unconscious.

The insights provided by social psychology have allowed this article to demonstrate how IHRL monitoring mechanisms can interpret the pre-existing IHRL framework to address dehumanisation through their monitoring practice. Specifically, pre-existing positive State obligations to prevent hate speech and foster tolerant societies, in theory, should be sufficient to counter dehumanisation as a cause of rights violations. Significantly, the AC-FCNM, CERD and HRC have clearly elaborated the content of States’ positive obligation to prevent hate speech and have struck a balance between competing rights in this respect. However, the interpretation of the positive State obligation to foster tolerant societies requires strengthening and further elaboration by all IHRL mechanisms if out-groups are to be protected from rights violations. This obligation is central to challenging unconscious and implicit dehumanisation as well as the societal conditions that allow dehumanisation to occur. IHRL mechanisms must require that States not only educate their societies about out-groups but also create opportunities for intercultural interactions to take place, during which friendship and affective ties can be forged. The removal of structural barriers is central to the success of these measures. Finally, States must be required to create a positive public culture, which recognises out-groups as an integral part of society. Significantly, all of these measures have a greater prospect of success if adopted to prevent rather than counter dehumanisation.

The most detailed elaboration of the content of the positive State obligation to create tolerant societies has, perhaps unsurprisingly, originated from targeted mechanisms. However, dehumanisation not only results in discrimination and violations of identity rights but also underpins serious and widespread rights violations, including the commission of mass atrocities. Consequently, the HRC and ECtHR must also engage with the impact of dehumanisation on the realisation of rights and require that States take measures to address dehumanisation, if absolute rights, such as the prohibition of torture, are to be guaranteed.

If IHRL is to achieve its purpose and protect out-groups from rights violations, IHRL monitoring mechanisms must seek to strengthen States’ positive obligation to create tolerant societies within their respective frameworks and provide non-prescriptive guidance regarding how this can be achieved in practice.
